Process of running the UQC

Centre for Climate Change
University Rovira i Virgili
Tortosa 2016

Step 1. Prepare data according to the UQC instructions, save in a folder labelled with the station name within the UQC-data folder

Step 2. Copy data files into working directory. Run UQC on data, save all output in a folder labelled StationName_UQC_1. Check through results and correct values in the data files as required.

Step 3. Repeat step 2 until you are satisfied with the results. Save every round of tests (and data file) in new folders, for example StationName_UQC_2, StationName_UQC_3 etc.

Step 4. When you are happy,copy and paste the output file contents from the final run into a .txt file called 'results.txt'. You can comment on the results file to provide information on the errors.
